

Client Setup (Installing React App)

ShopEZ E-commerce Application

Follow these steps to initialize and set up the React frontend client for the ShopEZ application:

Step 1: Initialize Vite React App

Open the Client folder in the terminal of VS Code and run:

```
npm create vite@latest . -- --template react
```

Step 2: Select Framework

Select the React framework from the given options in the terminal:

- Select a framework: **React**

Step 3: Select Variant

Select the JavaScript variant from the given options:

- Select a variant: **JavaScript**

Step 4: Navigate to Client Folder

Now let's navigate to the client folder by giving the following command:

```
cd client
```

Step 5: Install Packages

To install all the required dependencies and packages, run the following command:

```
npm install
```

Step 6: Start the Development Server

To start the React server, type the following command:

```
npm run dev
```
